

Elastomeric Suspension System Skateboard Truck

Abstract

The Elastomer Suspension System Skateboard Truck is designed for general use in all styles of skateboarding. This skateboard truck differs from conventional skateboard trucks by incorporating an elastomer suspension system. This suspension system is calculated to diminish or eliminate all forces associated with sudden or rapid motions. By downgrading these extreme shock forces the skateboard has more control and is therefore, more maneuverable. This stability will be of great advantage to both professional and amateur skateboarders alike.
